

OLYMPUS ART MINING

UPGRADE YOUR WYOMING FORMULA

Premium White Calcium Bentonite.
Lower Carbon Footprint.
Lighter Volume.

**DIRECT TO YOUR SILOS:
OCEAN-FREIGHT LOGISTICS**

We bypass domestic rail bottlenecks.
We deliver our raw premium clay directly to the
US East Coast and Gulf Ports (Baltimore,
Norfolk, Houston, Montreal) using chartered
Breakbulk vessels and Marine-Grade Big Bags.
Maximum EBITDA optimization is achieved on
volume orders of 10,000 MT and above.

SECURE YOUR SUPPLY TODAY

OLYMPUS ART

MINING

UPGRADE YOUR WYOMING FORMULA

The Legacy & The Mountain

A 36-YEAR LEGACY OF PURITY & PRECISION

For over three decades, Olympus Art has built a global reputation in the high-jewelry sector, mastering the extraction, valuation, and refinement of the earth's most precious materials. Today, we apply that exact same 36-year obsession with *uncompromising purity, premium quality, and perfect whiteness* to heavy industrial minerals.

THE SOURCE: WE ARE THE MOUNTAIN

We are not brokers. Headquartered in Istanbul, our industrial mining division holds 30-year exclusive leases for three premium bentonite sectors in the Ordu-Ünye region of Turkey.

The Reserves: Over 100 Million Metric Tons of verified white calcium bentonite.

The Capacity: Our currently active one mine delivers a robust output of 150,000 to 200,000 MT annually. (We hold licenses for two additional reserve fields in the same region, allowing us to scale up to 500.000 MT / year based on partner demand)

Certified Excellence: ISO 9001 | ISO 14001 | ISO 45001 | ISO 31000

THE STRATEGY: THE POWER OF BLENDING

You do not have to completely replace your current supply chain. **Blend our 94.75% pure white calcium clay with your standard gray Wyoming sodium bentonite.** Instantly elevate your product's color profile to the Premium segment. Slash your packaging weight. Significantly reduce your corporate carbon footprint (ESG) by replacing cross-country diesel rail freight with efficient, direct ocean freight.

UNCOMPROMISED PURITY:

TECHNICAL METRICS (*Based on independent accredited laboratory analysis*)

•The Whiteness Factor (Low Iron):

1.12% Our exceptional low-iron chemistry guarantees the premium white color your brand needs, without the dark gray/brown tones of standard clays.

•The Lightweight Advantage (Volume Optimization):

Bulk Density: 0.85 - 0.95 g/cm³ Fill the exact same retail volume while dropping your packaging weight by 10% to 15%.

•The Activation Engine:

Calcium Base (: 2.07% / : 0.07%) with 68.6% Montmorillonite. Perfectly structured for rapid soda-ash activation in your facility.

The Safety Shield (Zero Toxicity): Arsenic (As), Cadmium (Cd), Mercury (Hg) < 1.0
